

 **GLOBAL SURVEY**

Assessing awareness and education of women about the potential risks of blood clots during pregnancy and after delivery

[WorldThrombosisDay.org/Survey](https://WorldThrombosisDay.org/Survey)

Blood clots are a leading cause of preventable death during pregnancy and postpartum, yet many women remain unaware of the risks. At World Thrombosis Day, we're committed to improving education around this serious issue, and **we need your help!**

We are conducting a new research study to better understand women's awareness of blood clot risks during pregnancy and postpartum. **If you are currently pregnant or have been pregnant in the last 12 months, [please complete this important survey](#).**

The survey is available in 11 languages. If you are an organization or advocacy group, please share this survey with your network to help us gather as many responses as possible. Together, we can raise awareness and protect more women. Thank you for your support!
